

Issues Identified in Starter Code

1. Missing lang attribute in all <html> tags, affecting accessibility.
2. Missing <meta charset> declaration in all files.
3. Missing viewport meta tag, preventing proper responsiveness.
4. Overuse of non-semantic <div> elements instead of <header>, <main>, <section>, and <footer>.
5. Header and footer content incorrectly placed inside <div> elements.
6. No <main> element used to define the primary content area.
7. No navigation menu included across pages (required for all pages).
8. Missing consistent navigation links between pages.
9. Content not grouped using semantic <section> elements.
10. Images across all pages lack alt attributes, reducing accessibility.
11. Email addresses are plain text and not clickable (mailto: links missing).
12. Contact form is incomplete: inputs lack labels, IDs, and names.
13. No HTML5 validation attributes used in the form (e.g., required, minlength).
14. Input types are incorrect (email field uses type="text" instead of type="email").
15. No use of <article> elements for individual projects.
16. Poor content hierarchy and lack of semantic structure.
17. Inconsistent indentation and formatting across files.
